Benefits of BHRT

Hormones, particularly estrogen and progesterone, can become imbalanced due to aging, but other factors also impact this balance.

Stress (emotional, physical, and dietary), poor sleep, hygiene, being overweight, and environmental factors can create a hormonal imbalance or worsen one that already exists. BHRT identifies the imbalance, and utilizes a variety of hormone supplements to restore the balance, which is essential for your physical, mental, and emotional health.

What is Bio-Identical Hormone Replacement?

Bio-Identical Hormone Replacement uses hormones, which are identical in structure to the ones produced naturally by your body. The hormones are formulated in creams, ointments, capsules, or sublingual drops in individualized doses tailored to achieve your normal hormone balance.

Are you A Candidate?
