

Health & Wellness

How many prescriptions does a good pharmacist like to fill?
None! Nada! Nicht!

How we keep you in the pink and save you green:

- **Vitamin & Supplement Support**

Taking vitamins and certain supplements can help with general health and disease management. Our forty card information system can help you determine a vitamin and supplement program appropriate for you.

- **Drug Induced Nutrient Depletion**

Current scientific findings indicate that medications can rob your body of essential nutrients. We highly recommend the replacement of these key nutrients. We will provide a comprehensive system that outlines nutrient depletions and we will recommend formulations that will reestablish the delicate balance of nutrients necessary for optimal health. Feel free to speak with one of our pharmacists.

- **Nutritional Cleansing & Wellness Program**

Our bodies are riddled with toxins and impurities from the foods we eat and the environment in which we live. Ask about our Nutritional Cleansing and Wellness Program that will have you feeling, looking, and most importantly, living a healthy and more satisfying life.

- **Preventive Medicine**

Flu shots to help prevent the flu; vaccines for pneumonia and shingles—all readily available in the store. No appointment necessary!

The pharmacists at Wheelock Pharmacy would like to introduce you to our ideas about your health and the health of your family. Most pharmacies earn their bread and butter when you're feeling ill. We're going to change that! We've established a multi-faceted Preventive Health Program that can be customized to your needs. We believe that a good pharmacist should want to maintain your health, not just manage your illnesses. It's a Big Picture approach to wellness that can save you big.
